

The technologies comprise the following services

Updated on February 11, 2019

- 2G technology comprises the following services: voice, data (GPRS, EDGE), ensuring speed of up to 474 Kbps
- 3G technology comprises the following services: voice, data (R99, HSPA), ensuring speed of up to 42.2 Mbps
- 4G technology comprises the following services: voice (CSFB), data, ensuring speed of up to 150 Mbps for download and up to 50 Mbps of upload

CSFB service gives an opportunity to the subscribers to accept phone calls in 4G network. The voice call is performed by transferring from 4G technology to 3G; upon the session completion 3G is switched back to 4G.

The usage speeds of the mentioned technologies depend on the coverage, the load of the base station as well as on the quality and class of the device in use by the subscriber.

Technology definition explanation:

Yes – possible to use the service in the mentioned area

No - not possible to use the service in the mentioned area

#	Region	Populated area name	Populated area type	Technology
